

*“I would seriously recommend  
this coultter to anyone for no-tilling!”*

*— a RadialRazor™ no-tiller —*

*“Planting with our RadialRazor  
coultters, we cut through  
cornstalk residue with NO  
problems. We are 100%  
pleased. I run them deeper  
and set the seed depth  
shallower to get more  
accurate seed depth.  
With other coultter blades  
we would find beans in  
the residue, but not with these  
...and no dirt being pulled up.”*

# RADIALRAZOR®

**Patented edge design**...gradual rise and return of wave edge pattern sharply cuts through residue, not forcing it into the seed slot

**Ideal no-till seedbed**...makes a consistent, narrow planting slot with minimum soil disturbance, forming an optimum seed environment for uniform seed placement

**Versatile**...effective in wet or dry soils

**Ingersoll strong steel**...coultters are amazingly hard, yet flexible, constructed with Ingersoll's proprietary boron alloy steel

**Lower HP**...needed for vertical penetration

**INGERSOLL®**
