

# Nobody knifes through residue better than Ingersoll.

Ingersoll's ResidueRazor® edge is five times sharper than ordinary blades.

Manufactured with time-tested Ingersoll proprietary boron steel, ResidueRazor disc blades are amazingly hard and flexible at the same time. They maintain their sharp edge for long-lasting performance.

More producers use Ingersoll disc blades than any other brand. These blades are precisely built using complex, highly technical processes to be durable, flexible, and remain sharp.

Whatever tillage practice you use, ask for Ingersoll disc by name and your blades will....BE SHARP....  
WORK SHARP....AND STAY SHARP.
